(a)
memory held (bytes)
readings seen
DGX
Pi 5
Pico
(b)
AUROC in window
readings seen (window end)
(c)
AUROC
memory held (bytes)
(a) and (b)
connectome model
connectome model, slow recovery
per-band z-score
nearest neighbour, equal memory
nearest neighbour, every reading
autoencoder, fixed replay buffer
autoencoder, replays every reading
Gaussian process
9-billion-parameter language model, readings kept in its prompt
(c)
connectome model resized, 0.25 to 8 times the Kenyon cells
nearest neighbour, same plastic memory
autoencoder, 16 to 1,024 hidden units
nearest neighbour, every reading
